

# A1 PHASE 1, POLAND – MME SUPPLY

**Discipline:** Equipment Design, Supply & Commissioning

**Sector:** Infrastructure (Motorways)

**GROUP FIVE**  
structured ingenuity

**Client:** Minister of Infrastructure  
Gdansk Transport Company S.A

**Start:** 2007

**Description:**

Design, supply and commissioning of the toll collection and motorway management equipment.

The A1 Motorway in Poland extends from Gdansk in northern Poland to the Slovakian border and is part of European Road E 75 which provides access to Southern Europe. The A1 motorway will cross the A2 and A4 motorways in Poland. It is therefore part of Poland's international route connection. Intertoll had a pivotal role in the successfully signing of the Concession Contract in 2004 and achieving financial close in 2005. Project consists of 90 km of tolled A1 Motorway south between Gdansk and Nowe Marzy.

Intertoll Construction Sp. z.o.o. (100% Intertoll Europe ZRt. affiliate) is in charge of the design, supply and commissioning of the toll collection and motorway management equipment (HSWMs, TLE sites, MET stations, ECBs, Scada system, telephone and CCTV).

The Scada system helps the dispatcher works to control, collect and pass the data and information of the MME to CCB. The toll facilities design and project management was also carried out by Intertoll.

Other roles of Intertoll in this project:

- Intertoll Infrastructure Developments BV has a 15% stake in the Concession Company (GTC-Gdansk Transport Company);
- Intertoll Polska Sp. z.o.o. (100% Intertoll Europe ZRt. affiliate) is in charge of the operation and maintenance of the motorway as well as the manual toll collection.
